Eligible to work in Canada — Open Work Permit

SUMMARY

3D Modeler and Asset Artist with production experience in game cinematics and VFX, specializing in characters, creatures, costumes, props, and hard-surface assets. Experienced in rebuilding low-resolution game models, reconstructing assets from incomplete 3D scan data, and developing detailed assets from limited concept references. Skilled in modeling, sculpting, PBR texturing, and look development, with additional experience collaborating across departments and proactively developing Houdini-to-Unreal grooming workflows.

WORK EXPERIENCE

3D MODELER

Apr 2025 – May 2026

COOT IMAGEWORKS (3D Animation & Motion Capture Studio), Bucheon, South Korea

- Modeled 22 character and asset components across released and unreleased game cinematic productions, including faces, bodies, creatures, costumes, armor, props, and hard-surface elements.
- Rebuilt low-resolution game assets for main characters as high-detail cinematic models, replacing baked normal details with modeled geometry and refined materials.
- Collaborated with rigging and FX by creating simplified proxy geometry and communicated with other departments to review assets under final cameras and lighting.
- Initiated and developed a Houdini-to-Unreal workflow that organized hair cards into groom guides, preserving silhouettes while cutting production time from three days to one; the workflow was used to build 12 hair assets and became the studio standard.

3D MODELER

Nov 2024 – Feb 2025

WESTWORLD (VFX Studio), Goyang, South Korea

- Created a mechanical-organic asset from a single concept image, demonstrating curiosity to learn and grow by interpreting unseen structures and developing secondary details. Designed three variations of an organic surface motif, one of which was selected by the modeling team and approved by the studio lead.
- Reconstructed three props from incomplete 3D scan data, resolving holes, inaccurate forms, topology, and UV issues to create clean production assets.
- Modeled the camera-visible portion of a vehicle from live-action footage so the compositing team could generate a matching lighting pass for a green-screen sequence.

SKILLS

Software

Maya • ZBrush • Marvelous Designer • Substance 3D Painter • Houdini • Autodesk Arnold • Unreal Engine

Production Skills

3D Modeling (Characters, Props, Creatures, Hard-Surface) • High-Poly Sculpting • Texturing • Look Development • Grooming & Hair Simulation (Houdini, Unreal Engine)

EDUCATION

Sungshin Women's University

Mar 2018 – Feb 2023

Bachelor of Fine Arts in Industrial Design, Seoul, South Korea

CG5 ACADEMY

Feb 2022 – Apr 2024

Professional Training in 3D Modeling, Seoul, South Korea
